Basic engineering ,sometimes refered to as FEED, primarily provides preliminary estimates of the facility in other to give the EPCI (Detail engineering,procurement,construction and installation)contractor a basis for bidding. As a matter of fact, the basic engineering phase can entail evaluating the EPCI contractors.

The engineering design process is a common series of steps that engineers use in creating functional products and processes. The process is highly iterative - parts of the process often need to be repeated many times before another can be entered - though the part(s) that get iterated and the number of such cycles in any given project may vary.. It is a decision making process (often iterative ...
